

Figure 2-14
Mile 92 Crow Canyon

The majority of the bosque was cleared during RGCP construction and is now dominated by herbaceous vegetation and salt cedar. A straight, stepped channel extends from Crow Canyon dam to the west side of the river channel south of mile 93. The ROW on the west side of the river abuts land owned by BLM. A large area of ROW on the eastern side of the river is mowed but not grazed. A few mature and young cottonwoods are growing in this area. Isolated areas contain wetland vegetation indicating a high water table.

Integrated USIBWC Land Management Alternative

Point Project Measures	ID	#	Area (ac)
Bank shave downs*	92B	1	17.9

Targeted River Restoration Alternative

Point Project Measures	ID	#	Area (ac)
Open former meander**	92C	1	84.6

* Bank shave downs acreage is included in the Targeted River Restoration Alternative as a linear measure "Seasonal peak flows".

* * The meander is outside the hydrologic floodplain but considered a potential measure due to relative elevation. However, due to elevation, not considered a location for planting measures (Alternative 3)
